## TX312

### Proteco introduces a new transmitter for Professional range

The new remote control, especially designed for professional home automation market, combines small size and ergonomics. The shape is neat and elegant, while a soft shell prevents from accidentally slippery.

Easy and screw-free battery replacement, while the electronic card stays covered and protected at any time.

X312 is a 3-channel radio transmitter with frequency 433.92MHz and it is compatible with all Proteco receivers.

Each transmitter works on a fix radio code automatically generated and up to 16 millions of random generated codes are possible. Moreover, radio codes on the three channels can be replaced by new random generated ones or can be copied on another TX312 transmitter through an easy procedure.

TX312 is now available for sale and it will be soon the standard transmitter in all Proteco kit for the Professional range.

## NEW BOX for control panels

### Proteco control panels change their outfit.

PAR04 is the new box for Proteco control panels.

The shape has been completely redesigned while a light grey has been adopted to protect the electronics as much as possible from solar radiation.

In the lower part of the box there are four rubber grommets that allow a neat and easy wiring.

The new box can lodge a pair batteries 12V-1,2Ah, which can be used as back-up power supply in case of a power cut or to connect a solar panel to the system.

The new box also changes the kits' inside packaging and grants a better protection of the control panel during transport and storage.
